

High Performance Submersible Pump

PONSTAR

OPERATION MANUAL

< PX-55011 / 55022 / 55022A >
< PXL-52511 / 52522 >

- Thank you for choosing Koshin Submersible Pump.
- This manual is prepared for your safety when operating pump. Please read carefully and comprehend fully before use. (Wrong usage could cause injury or death.)
- Please keep this manual handy for future reference.

PLEASE READ THIS MANUAL BEFORE OPERATION.

"ACCEPTABLE FOR INDOOR OR OUTDOOR USE" "SUBMERSIBLE PUMP"

⚠ CAUTION ⚠

Before use, please make sure to read the instruction manual.
Do not operate the pump out of water or insufficient water.

⚠ WARNING ⚠

Risk of electric shock. This pump is supplied with a grounding conductor and grounding-type attachment plug. To reduce risk of electrical shock, connect only to a properly grounded, grounding-type receptacle.
TO REDUCE THE RISK OF ELECTRIC SHOCK, INSTALL ONLY ON A CIRCUIT PROTECTED BY A GROUND-FAULT CIRCUIT-INTERRUPTER (GFCI).

⚠ NOTE ⚠

This pump has not been investigated for use in swimming pool or marine areas.
This pump has been evaluated for use with water only.

AFTER USING PUMP

1. In cold climates, do not allow pump to freeze.
Remove pump from water to prevent damage due to freezing.
2. Completely drain and dry pump of water before storing.

⚠ CAUTION

The pump is used a double mechanical seal.
(See figure)
Consulting the following table assemble it.

Mechanical seal	Motor side (Carbon)	Pump side (Carborundum)
Outside diameter	22.5mm	20.5mm
Internal diameter	18.5mm	15.0mm

Double mechanical

TROUBLESHOOTING GUIDE

PROBLEM	POSSIBLE CAUSE	SOLUTION
No start at all or stops immediately after start	Not properly connected to power circuit	Correct the connection
	The GFCI, leakage circuit breaker is actuated	Check the power circuit
	The impeller is caught by foreign substance	Repair the point of leakage
	Motor is burnt	Repair or replace
	Voltage drop	Raise the voltage to the rating
Failure during operation	The protector is actuated	Remove foreign substance if the impeller is clogged
		Lower the liquid temperature if it is too high
No pumping or poor performance	Voltage drop	Raise the voltage to the rating
	High delivery head	Lower the head
	Discharge pipe is clogged	Overhauling
	Impeller wear	Replacement
	Clogging of foreign matter in strainer pump	Overhauling

INSTALLATION AND USE

- An acceptable motor-control switch shall be provided at the time of installation.
- Thermally protected

- 1.This pump works under an automatic surface control system whereby it is automatically switched on and off by a float switch.
- 2.The pump starts automatically when the water level rises and the float comes up to the ON water level, and stops automatically when the water level falls and the float comes down to the OFF water level.
- 3.The ON and OFF water levels can be adjusted by loosening the cord band bolt. However, the length of the cord between the cord band and the float switch should be between 50mm and 150mm, otherwise the float switch will not operate normally.
- 4.The float switch should be installed where it does not come into contact with walls or is any other obstructions.
- 5.The pump should not be installed where water is discharged directly onto the float.

AFTER USING PUMP

1. In cold climates, do not allow pump to freeze.
Remove pump from water to prevent damage due to freezing.
2. Completely drain and dry pump of water before storing.

⚠ CAUTION

1. Leak Current Breaker

For home use, attach a leak current breaker, GFCI (offered separately) to ensure safety.

2. Connect the power source

Absolutely refrain from connecting this pump to any other power source than 110V AC or 220V AC, 50Hz.

3. Water to use

Absolutely refrain from using the pump for any oil, sea water, strong alkaline or strong acidic solution, or any agricultural chemicals.

4. Do not run dry!

Idling can cause trouble, to prevent short cycling place pump at deepest position as possible.

5. Handling of power cord (cabtype cable)

- a. Never lift or move pump by power cord. Only lift by handle or tie rope supplied to handle.
- b. Select and use proper size extension cord. Do not run extension cord in water.

6. Using in bath, etc.

Do not enter the water when pump is being used.

- 3 -

MAINTENANCE AND INSPECTION

1. Periodically check the insulated condition with a megger tester.
To be acceptable, the resistance between the earthing wire and the power cord should be 100Meg ohm and higher.
2. The shaft of the water-tight mechanism as the most critical part of the pump is sealed with liquid paraffin. The life changes greatly depending on the operating condition but the quantity should be checked periodically.
Use 230cc of Crystol No.70 by Exxon Mobil Corporation for the sealing.
The liquid paraffin can be checked easily by removing the hexagon socket head bolt at a lower side of the pump body.
